

Omni to Introduce Electric Drive System for Urban Vehicles

January 15, 2021

For Immediate Release

Omni Powertrain Technologies, working closely in cooperation with a manufacturer of suspension systems, announces the availability of a new electric drive option for urban bus and truck applications. The new development combines an e-drive unit with an independent suspension. It was designed to meet the needs of vehicles with 4x2 or AWD configurations.

With a rated capacity of 4.5 tons, each unit features tandem axial flux electric motors, a high-speed transaxle/transverse gearbox, and inverters from Omni Powertrain. The complete system will be marketed in North and South America under the Omni Powertrain brand. More information can be obtained by inquiring at info@omnipowertrain.com.
